The Right Bolt Every Time

Refining is a high stress environment demanding nothing short of quality specifications for plates and bolts. The best maintenance practices require changing bolts with every plate change. Often plate breakage can be attributed to bolt failures due to reusing bolts, improper torque, or poor quality.

J&L's new bolt program offers customers the right hardware, convenience, quality, and assurance. For over 35 years, J&L has been committed to supplying customers with the right plates for their refining conditions. Now J&L customers can receive the same level of quality and technical expertise when ordering bolts from J&L.

When you order plates from J&L, we will, at your request, send you the right bolt in the right quantity – right along with your plates. Bolt failure is risky business. But with J&L's bolt program there's no need to worry. J&L determines the correct bolt materials, bolt designs, and torque specifications to ensure proper clamping force between the refiner plates and your refiner.

Knowing the bolts you'll receive from J&L are of the highest quality, there's one less thing for you to worry about. Don't sweat the small stuff. Let J&L take care of your bolt needs.

J&L's Bolt Program can help you eliminate bolt errors, save time, ensure quality, and reduce risk.
