Rest Easy with J&L Fiber Services

Want to save energy, reduce fiber loss, improve fiber quality, increase capacity, lengthen plate or screen life . . . improve your overall pulping process? Rest easy with J&L on your side. For all your refiner plate and screen cylinder needs, you can always count on J&L for the best product and service.

For over 30 years, J&L Fiber Services has provided the pulp and paper industry with service excellence, product innovation, and customer satisfaction with its core products and services, which have traditionally been focused on refiner plates and screen cylinders. In order to apply more resources toward its core competencies and strengthen market position both domestically and internationally, J&L has elected to exit the capital refiner business and has sold the principal assets associated with its refiner rebuild and spare parts operation to GL&V.

Don't let this worry you. J&L's unrivalled refining process expertise, high quality product standards, and first rate technical and customer service will continue to help customers achieve their refiner plate and screen cylinder objectives. J&L offers the best in segmented refiner plates for low and high consistency applications, full circle remachinable plates, segmented milled bar, multi-disc packs, fabricated and cast conical fillings, disperger/deflaker fillings, and a full line of technologically advanced screen cylinders.

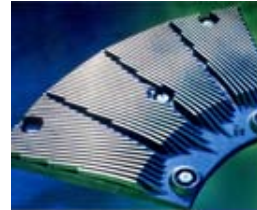

Fred Schillinger, J&L's President and General Manager adds, "This action enables J&L to realign its resources and leverage opportunities in new and existing markets. I am excited about the future for J&L as 100% of our efforts are focused on its core competencies."

Which means, we are here to address your every need in refiner plates and screen cylinders. It's what we do best. So go ahead, rest easy with no worries from J&L.
